

## Summer Science Homework Year 9 into 10

Next year you will either be doing GCSE Combined Science which will give you two Science grades, or separate GCSE Biology, Chemistry and Physics.

You have already started the work for these subjects and should understand the importance of the required practicals.

In your final exams, you will be given exam questions on the required practicals so you need to know and understand each one.

To be well prepared you need to have a really thorough understanding of all the practicals and the earlier you start learning about them and being able to explain what you would do, the better you will do.

In the Summer term you will have done two of the required practicals and these are:

### **Microscopy**

Use a light microscope to observe, draw and label biological specimens.

<https://www.youtube.com/watch?v=jBVxo5T-ZQM>

### **Density**

Use appropriate apparatus to make and record the measurements needed to determine the densities of regular and irregular solid objects and liquids.

<https://www.youtube.com/watch?v=ScXOp8Zph28>

### **Your Homework**

Use your checklist in your book and watch videos on free science lessons.co.uk relating to the required practicals covered this year.

Write a full method for each one, which includes describing the variables.

Learn about each required practical ready for exam questions on them.

### **How will you be assessed on this homework?**

Pupils will sit an assessment on these in the first two weeks of September. This will be a long, 6 mark exam question.

## Other useful information to start learning.....

### GCSE Science / Physics

#### Physics Equations and Units

Symbol	Quantity	Unit	Unit name
$F$	(resultant) force	<b>N</b>	<i>newtons</i>
$W$	weight		
$M$	moment of a force	<b>N m</b>	<i>newton metres</i>
$g$	gravitational field strength	<b>N/kg</b>	<i>newtons per kilogram</i>
$m$	mass	<b>kg</b>	<i>kilograms</i>
$v$	velocity/speed OR wave speed	<b>m/s</b>	<i>metres per second</i>
$p$	momentum	<b>kg m/s</b>	<i>kilograms metres per second</i>
$a$	acceleration	<b>m/s<sup>2</sup></b>	<i>metres per second squared</i>
$t$	time	<b>s</b>	<i>seconds</i>
$T$	period		
$f$	frequency	<b>Hz</b>	<i>hertz</i>
$k$	spring constant	<b>N/m</b>	<i>newtons per metre</i>
$e$	extension	<b>m</b>	<i>metres</i>
$s$	distance		
$h$	height		
$l$	length		
$\lambda$	wavelength		
$A$	area	<b>m<sup>2</sup></b>	<i>metres squared</i>
$p$	pressure	<b>N/m<sup>2</sup></b> <b>Pa</b>	<i>newtons per metre squared</i> <i>OR pascals</i>
$V$	volume	<b>m<sup>3</sup></b>	<i>metres cubed</i>
$\rho$	density	<b>kg/m<sup>3</sup></b>	<i>kilograms per metre cubed</i>

$W$	work done	<b>J</b>	<i>joules</i>
$E$	energy transferred		
$E_e$	elastic potential energy		
$E_k$	kinetic energy		
$E_p$	(gravitational) potential energy		
$P$	power	<b>W</b>	<i>watts</i>
$c$	specific heat capacity	<b>J/kg°C</b>	<i>joules per kilogram degrees celsius</i>
$L$	specific latent heat	<b>J/kg</b>	<i>joules per kilogram</i>
	efficiency	<b>% or decimal</b>	
$Q$	charge	<b>C</b>	<i>coulombs</i>
$I$	current	<b>A</b>	<i>amps</i>
$V$	potential difference (voltage)	<b>V</b>	<i>volts</i>
$R$	resistance	<b>Ω</b>	<i>ohms</i>
$B$	magnetic flux density	<b>T</b>	<i>tesla</i>

**Remember:**

- Most units are upper case (e.g. T, J, N, A...) – you must write them like this, you won't get the mark if you use lower case for these.
- Work done is another way of saying energy transferred.

See the Physics Equations below.....

## Physics Equations

Equation number	Word equation	Symbol equation
1	weight = mass × gravitational field strength $g$	$W = m g$
2	work done = force × distance along the line of action of the force	$W = F s$
3	force applied to a spring = spring constant × extension	$F = k e$
4	moment of a force = force × distance normal to direction of force	$M = F d$
5	$pressure = \frac{\text{force normal to a surface}}{\text{area of that surface}}$	$p = \frac{F}{A}$
6	distance travelled = speed × time	$s = v t$
7	$acceleration = \frac{\text{change in velocity}}{\text{time taken}}$	$a = \frac{\Delta v}{t}$
8	resultant force = mass × acceleration	$F = m a$
9 HT	momentum = mass × velocity	$p = m v$
10	kinetic energy = $0.5 \times \text{mass} \times (\text{speed})^2$	$E_k = \frac{1}{2} m v^2$
11	gravitational potential energy = mass × gravitational field strength ( $g$ ) × height	$E_p = m g h$
12	$power = \frac{\text{energy transferred}}{\text{time}}$	$P = \frac{E}{t}$
13	$power = \frac{\text{work done}}{\text{time}}$	$P = \frac{W}{t}$
14	$efficiency = \frac{\text{useful output energy transfer}}{\text{total input energy transfer}}$	
15	$efficiency = \frac{\text{total power output}}{\text{total power input}}$	
16	wave speed = frequency × wavelength	$v = f \lambda$
17	charge flow = current × time	$Q = I t$
18	potential difference = current × resistance	$V = I R$
19	power = potential difference × current	$P = V I$
20	power = (current) <sup>2</sup> × resistance	$P = I^2 R$

21	energy transferred = power × time	$E = P t$
22	energy transferred = charge flow × potential difference	$E = Q V$
23	$density = \frac{mass}{volume}$	$\rho = \frac{m}{V}$

## Some chemistry facts to learn by heart.....

### **Some common formulae that you should know**

<b>H<sub>2</sub>O</b>	water	<b>CO<sub>2</sub></b>	carbon dioxide
<b>CO</b>	carbon monoxide	<b>H<sub>2</sub>SO<sub>4</sub></b>	sulfuric acid
<b>HNO<sub>3</sub></b>	nitric acid	<b>NaOH</b>	sodium hydroxide
<b>KOH</b>	potassium hydroxide	<b>NH<sub>3</sub></b>	ammonia
<b>SO<sub>2</sub></b>	sulfur dioxide	<b>CH<sub>4</sub></b>	methane
<b>NaCl</b>	sodium chloride	<b>CaCO<sub>3</sub></b>	calcium carbonate
<b>HCl</b>	Either a gas called hydrogen chloride, but when dissolved in water, hydrochloric acid		

### **Some common groups you need to know about**

There are some groups that you need to be able to recognise in formulae

**~NO<sub>3</sub>** a nitrate group, e.g. NaNO<sub>3</sub> is sodium nitrate

**~SO<sub>4</sub>** is a sulfate group, e.g. K<sub>2</sub>SO<sub>4</sub> is called potassium sulphate

**~OH** is a hydroxide group e.g. NaOH is sodium hydroxide. These are alkalis if soluble in water, or bases if not.

**~CO<sub>3</sub>** is a carbonate group, e.g. CuCO<sub>3</sub> is called copper carbonate

### **Tests for gases**

Oxygen – relights a glowing splint.

Hydrogen – makes a pop sound with a lighted splint.

Carbon dioxide – turns lime water cloudy when it is bubbled through.

Chlorine – turns damp blue litmus paper red and then bleaches it.
